# Identity proofing through biometric facial recognition and thorough ID document verification.

## Making smooth and reliable customer onboarding a reality

The AuthentiScan web API offers high-quality identity proofing including biometric facial recognition and thorough ID document verification. The secure digital process allows new customers to onboard on the go without having to go into a branch in person with documents proving their identity. Companies can verify a customer's identity through a photo of themselves and a photo of an eligible ID document, such as an ID card, driver's license or passport.

## A more convenient and less intrusive onboarding process

The web API can be integrated into your company's existing platform to provide a seamless, simple to use, identity proofing process as part of, for example, a banking app. The biometric technology in AuthentiScan offers your customers a more convenient and less intrusive onboarding process. It enables new customers to identify themselves electronically.

AuthentiScan is seamlessly integrated into your company's own digital environment, so it's branded with your corporate identity. The entire process reflects the familiar, trusted identity of your company. The result: a smooth and reliable online onboarding experience.

## Checks supported

**MRZ check:** Quick and easy means of ID document verification by checking the machine readable zone (MRZ).

**Pattern Matching:** Are the specific data components ( e.g. name, surname, place of birth) where they should be in the document?

**Validity check:** Is the document still valid? AuthentiScan checks the expiration date of the ID document.

**Face Match:** Is the person presenting the ID the real owner? Assess the extent to which a photo on the ID document matches the person's face.

**VIZ to MRZ comparison:** AuthentiScan compares the Visual Inspection Zone (VIZ) with the MRZ code.

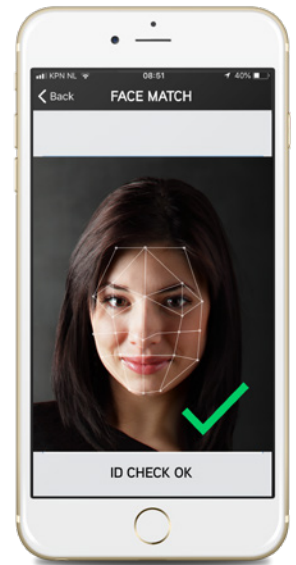

**Keesing Expert Helpdesk Support:** In case of doubt, you can always contact our Helpdesk; staffed by Doc 3 certified professionals.

# Smoothly onboard new customers. Anytime, anywhere.

## Keesing AuthentiScan web API

Real-time customer identification to drive customer acquisition and deter fraud.

- Secure your onboarding process while remaining convenient for your customers
- High-quality, online identity proofing within minutes
- Biometric facial recognition - by comparing a selfie to the picture on the ID document
- Extensive ID document verification - against comprehensive document template database
- Drive customer acquisition
- Meet mandatory AML compliance requirements
- Audit trail
- Seamless integration in your applications
- Data is securely processed according to GDPR guidelines
- Protection against fraudulent transactions

## Onboarding process with Keesing AuthentiScan web API

## Efficient, GDPR compliant and scalable

The AuthentiScan web API streamlines your customer's onboarding journey. It increases security and efficiency, while reducing your operational costs and the time for customer enrolment.

The OCR autofill option extracts the data from the customer's ID document to automatically fill out the application form. This reduces the chance of a customer entering a name different from the one on their ID document. All personal data collected by AuthentiScan is processed securely according to GDPR guidelines.

Our scalable web API instantly boosts your customer onboarding volume by allowing customers to sign up for your services quickly and easily.

## Audit Trail

Keesing AuthentiScan automatically creates a detailed report for each ID check. As a result, you create a comprehensive audit trail. Our web API offers various options for sharing and reporting data.

## Get started

Get started with our web API to enhance your customer's onboarding journey. Contact our Sales Team to get going today via [sales@keesingtechnologies.com](mailto:sales@keesingtechnologies.com) or telephone +31 (0)20 7157825. # Keesing Technologies

Keesing Technologies was founded in 1923 and leads the way in digital ID document and banknote authentication solutions.

Our objective is to help organisations prevent counterfeiting and combat fraud by providing the world's best authentication solutions. To this end, we market a range of printed and digital solutions that allow users - from document professionals to untrained staff - to assess the authenticity of nearly all ID documents and banknotes currently in circulation. Solutions that provide you with the assurance of a document's authenticity.

The technology we use is powered by nearly 100 years of experience and accumulated knowledge. Thousands of organisations around the world rely on our solutions every day.

Keesing is the owner of the world's most comprehensive source of genuine ID documents and banknotes. A database which provides you authoritative access to international ID documents and banknotes from over 200 countries and organisations. The database, which powers all our products, includes detailed descriptions and high-quality images of thousands of passports, ID cards, driving licences, visas, residence permits and banknotes. Keesing is trusted by Interpol as a partner for worldwide reference data on banknotes.

Keesing's objective is to develop the highest quality products and services. To achieve it, we cooperate with international government agencies, as well as embassies, consulates and central banks.

Keesing serves more than 6,000 organisations, including government agencies, security printers, temporary employment agencies, insurance companies, banks, telecom providers, solicitors and airlines. Keesing has offices in The Netherlands, France and the USA. Keesing collaborates with distributors, strategic partners and agents all over the world.

Keesing Technologies is a SURYS company.
