The 2021 series passports of Taiwan

These passports were first issued on January 11th, 2021 and contain a contactless chip in the back cover, that meets the ICAO specifications.

Cover

Biographical datapage

uv

Optically Variable Ink (OVI)

Ink containing optically variable pigments that generate a noticeable colour change (shift), depending on the angle of view and/or incidence of light.

See-through register

An image that is partially printed on both sides of the substrate. When the register is viewed under transmitted light, the two parts fit together seamlessly to create a single shape or pattern.

Diffraction Optical Variable Image Device (DOVID)

An optically variable feature composed of grids that diffract light. This allows various images and effects to be generated, including colour changes (shifts) as well as 2D and 3D images.

A word from our ID document expert:

The newly designed passport, features "Taiwan" prominently on the cover. The new passport cover reduced the font size of "Republic of China" (中華民國) and integrated it in the national emblem while enlarging the word "Taiwan" and placing it directly above the word "passport".

This 2021 series passport of Taiwan has a well-secured biographical datapage.

All personal and passport details are protected by a holographic laminate that incorporates a surface relief, nanotext as well as a zero order reflective device. An OVI and a see-through register are printed as background security for the biopage.
