Keesing
Data as a Service

How does it work?

Stage 1

Preparation

Understand your business and your processes to determine which use cases, and therefore which data, best suits your business.

Stage 2

Selection

Review the Keesing data available and create a "Data as a Service" package that matches your document checking needs.

Stage 3

Connection

When you contract with Keesing you will receive an API authorisation key and a data use profile.

Stage 4

Data management

Our API is based on RESTful integration, and our content is structured so you can quickly get what you need.

Stage 5

SUPPORT

After connecting and using, you will have access to the Keesing support and ticketing portal where service status information is available.

KEESING
Technologies

Trusted identity verification. Since 1911
