

New in Keesing Documentchecker

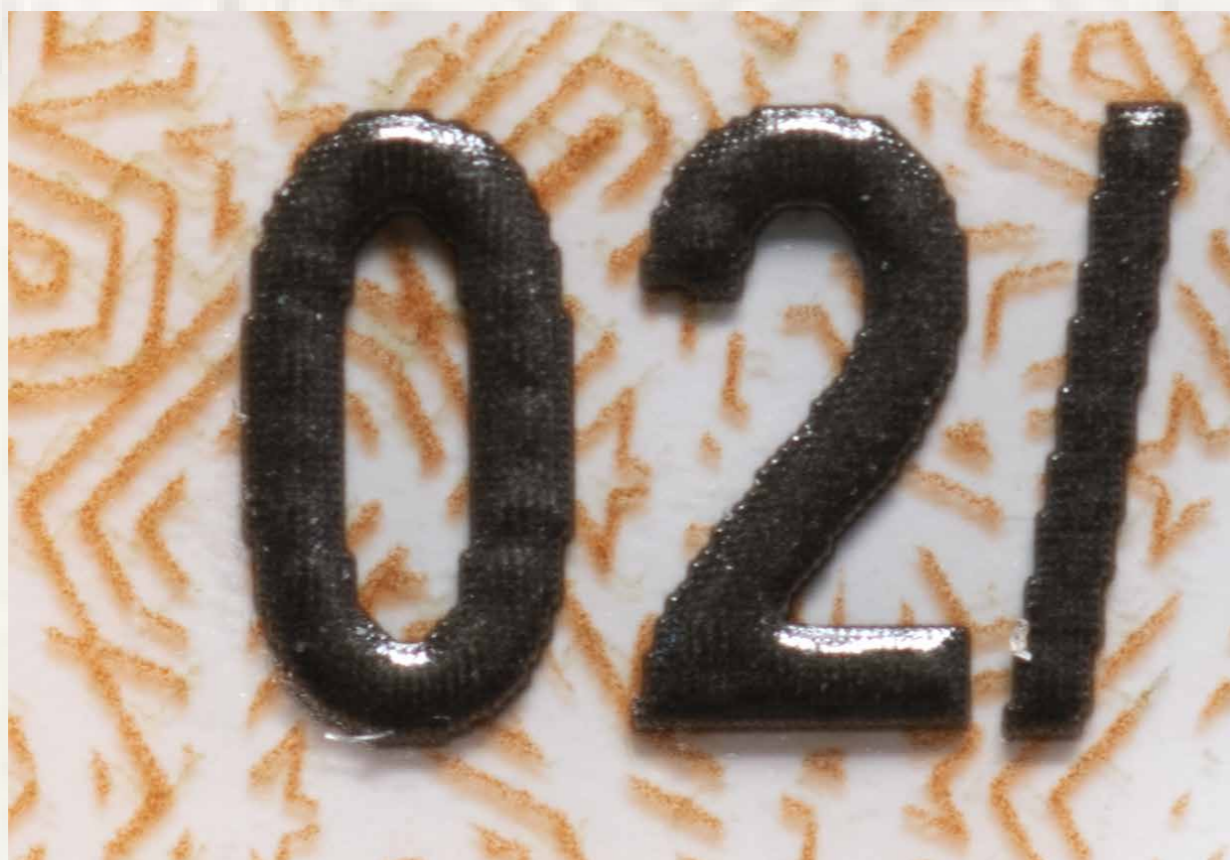

Arizona Driver's License

After 10 years, the Arizona driver license received an update includes more images that represent Arizona.

Dynaprint

A laser-generated optically variable image that changes colour when tilted.

Laser engraving

The process of engraving graphics and text in synthetic substrates using a laser.

Offset printing

An indirect printing technique whereby an image is transferred from a flat print plate to a rubber blanket before being transferred onto the substrate. Offset printing may be recognised by its sharp detail, fine line structure and solid areas of ink.

A word from our ID document expert:

The new Arizona driving license is a highly secured ID document and includes; made of polycarbonate, laser-engraved information, Dynaprint, Multiple Laser Image (MLI) and other features.

Feature again the Arizona state mammal Rocky, the ringtail. For the Dynaprint a Saguaro cactus and Ponderosa pine tree were chosen, to represent the diversity of Arizona terrain and communities.
